

# Managing complex lab projects with science-led precision.

Our project managers are scientists who have worked in labs just like yours, so they understand workflows, compliance, and exactly what is at stake. Whether you're planning a relocation, a refurbishment, or a wider transformation, every recommendation is grounded in science-first

thinking, from initial design through to completion. We lead every stage of your change, with full coordination of logistics, instrument servicing, and stakeholders. With a single point of accountability across the entire project, nothing falls through the gaps.

**Andy | Project Manager**

- MPhil in Chemical Pathology
- Background in Biochemistry and Pharmaceutical relocations
- Previously Director of Project Management Office at a leading OEM

**Sam | Project Manager**

- First Class Honours Degree in Life Sciences
- 20 years in clinical science, including relocating her own laboratories
- Previous Quality Manager

Most lab moves fail in the planning. Ours starts there.

Supporting you at every stage.

Your project lead across every stage, from concept to completion

**Strategy & Brief**

Define project scope, build the business case and propose optimal methodologies.

**Design & Coordination**

Ensure stakeholders are aligned with workflows & layout.

**Regulatory & Efficiency**

Support with regulatory guidance and consideration of future expansion planning.

**Relocation & Servicing**

Relocation by our own experienced team. Coordination of instrument servicing. Specialist insurance.

**Completion & Support**

Facilitate handover, evaluation workshops and continuous improvement initiatives.

**Change is inevitable.  
Disruption isn't.**
